

# organelles on protists and cells

**Across**

- 1. prokaryotes lack \_\_\_\_\_
- 3. the plant cell has a \_\_\_\_\_ vacuole than the animal cell
- 6. what protist uses a cilia to move
- 7. the cytoplasm feels like this jiggly food we eat
- 9. the golgi complex is also called \_\_\_\_\_
- 10. the nucleus is located in the \_\_\_\_\_ of the animal cell
- 15. what protist live in freshwater

16. what is used to photosynthesis for plant cells

19. what is a movement that pulls like a propeller on a protist

20. a paramecium is a \_\_\_\_\_ cell

**Down**

2. what protist reproduces both ways but mostly asexually

4. what oxidizes food molecules to create energy

5. a paramecium is a \_\_\_\_\_

8. an \_\_\_\_\_ is used to help

protist to see to photosynthesis

11. this manufactures proteins and is really small

12. what structures and protects the plant cell

13. whats another word for the vacuole

14. the euglena, amoeba, and volvox are all \_\_\_\_\_ cells

17. there is a smooth and \_\_\_\_\_ endoplasmic reticulum

18. what acts as the brain of all cells

**Word Bank**

- |              |             |            |             |          |
|--------------|-------------|------------|-------------|----------|
| rough        | larger      | paramecium | jello       | amazon   |
| eukaryotic   | cell wall   | pantry     | nucleus     | ribosome |
| mitochondria | chloroplast | amoeba     | center      | flagella |
| heterotroph  | organelles  | eyespot    | prokaryotic | all      |
