

trigonometry

Across

- 4.** $A^2 + B^2 = C^2$
- 5.** Opposite / adjacent
- 6.** either "opposite" or "adjacent" (next to) angle A
- 9.** two angles with a common vertex or side. Leg part of the angle.
- 10.** an angle that measures less than ninety degrees but more than zero.

Down

- 1.** a 45-45-90 triangle is an....
- 2.** a right triangle with some regular features that makes calculations on the triangle easier.
- 3.** the longest side of the right triangle, opposite of right angle.
- 7.** Opposite / hypotenuse
- 8.** Adjacent / hypotenuse
